

Challenges and Expectations in RoboCupRescue

Nobuhiro ITO

A Past Exec committee of RoboCupRescue Simulation League

Aichi Institute of Technology

RoboCup and Disaster Relief

RoboCup: A Big AI and Robotics Project

More than 3,000 participants from over 40 countries !

Soccer

Rescue

@Home, etc ...

Major Differences between Soccer and Rescue

The results of soccer cannot be applied directly to rescue.

	Soccer	Rescue
The Number of Agents	22 (11 vs 11)	Unspecified large number
Types of Agents	FW, MF, DF, GK (generally)	Many types Fire brigades, Fire Offices, Police forces, Police Offices, Ambulance Teams, Ambulance Centers, Civilians..., etc.
Abilities of Agents	The same abilities, except for GK	Different abilities for each type
Control	Autonomous Decentralized Control	Combination of Centralized and Decentralized control

Rescue is a more complex problem than soccer.

Promotion movie of RoboCupRescue

by Geo Technical lab and Zenrin, Japan

RoboCupRescue

Simulation League, Agent Competition (2000~)

Robot League (2001~)

Simulation League
Virtual Robot Competition (2006~)

The Roadmap of RoboCupRescue in Starting

- ~2000.6 Open Prototype Simulator in Public and Call for Participants
(Hakodate Japan Open, ICMAS Boston, Melbourne RoboCup WC, etc.)
- ~2001.8 1st Research Evaluation Conference
- ~2005.4 Full-Scale Simulation
- ~2020 Contribution in Real Disaster Fields
- ~2050 Mighty Rescue Robots in Practice
Contemporary 'Thunderbird' for S&R

Current Issues in RRS

Under Centralized and Decentralized Control

Partial observation, local (not global) communication

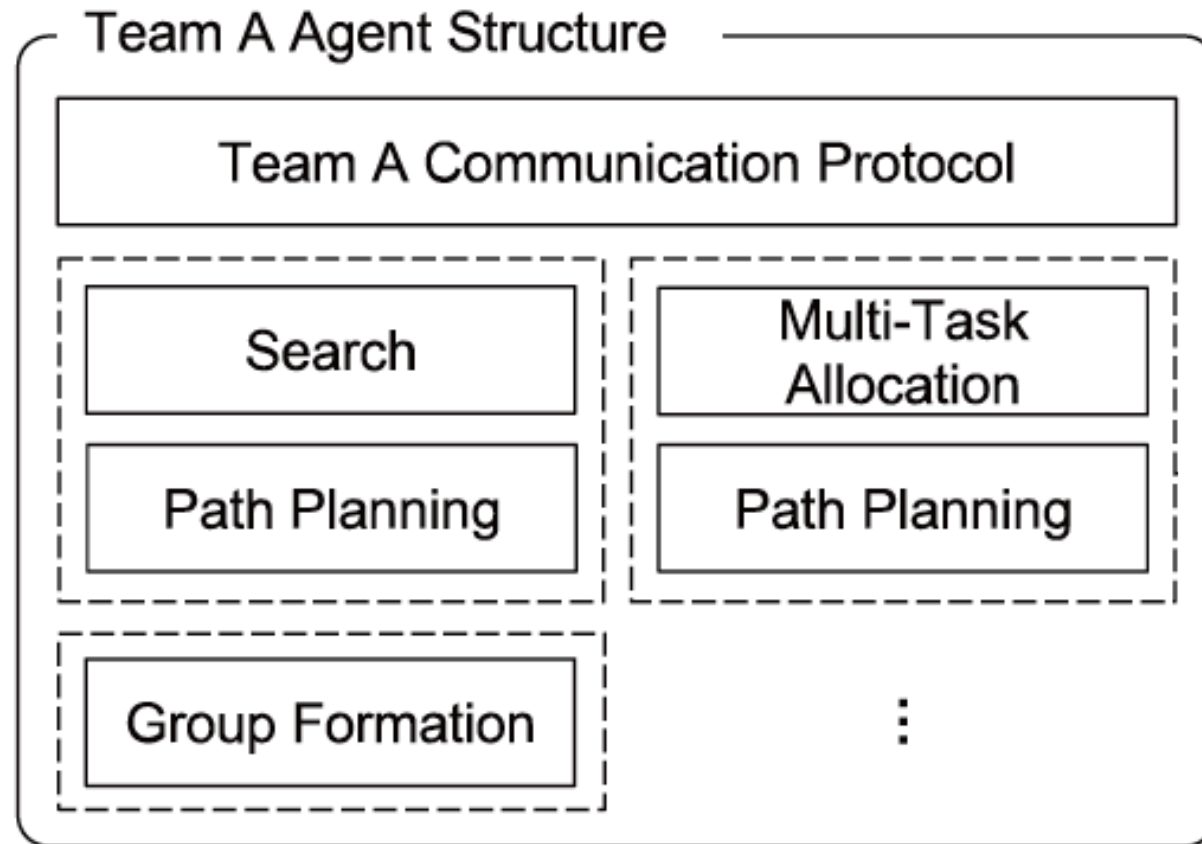

Major Challenges in RRS (Agents)

- Project Challenge**
 - ❑ Centralized/Decentralized Control and Management
 - ➔ Full/Partial/No communications
 - ❑ Centralized/Decentralized Multi-Task Allocation (Now)
 - ➔ Focus on rescuing civilians
- Infrastructure Challenge**
 - ❑ Component Sharing
 - ❑ Benchmarks for teams and the scientific community
 - ❑ Reference teams to support entrance in the competition as well as the development of learning approaches
 - ❑ Reusability of teams code for researches and competitions
 - ❑ Integration of agent and virtual robot competition

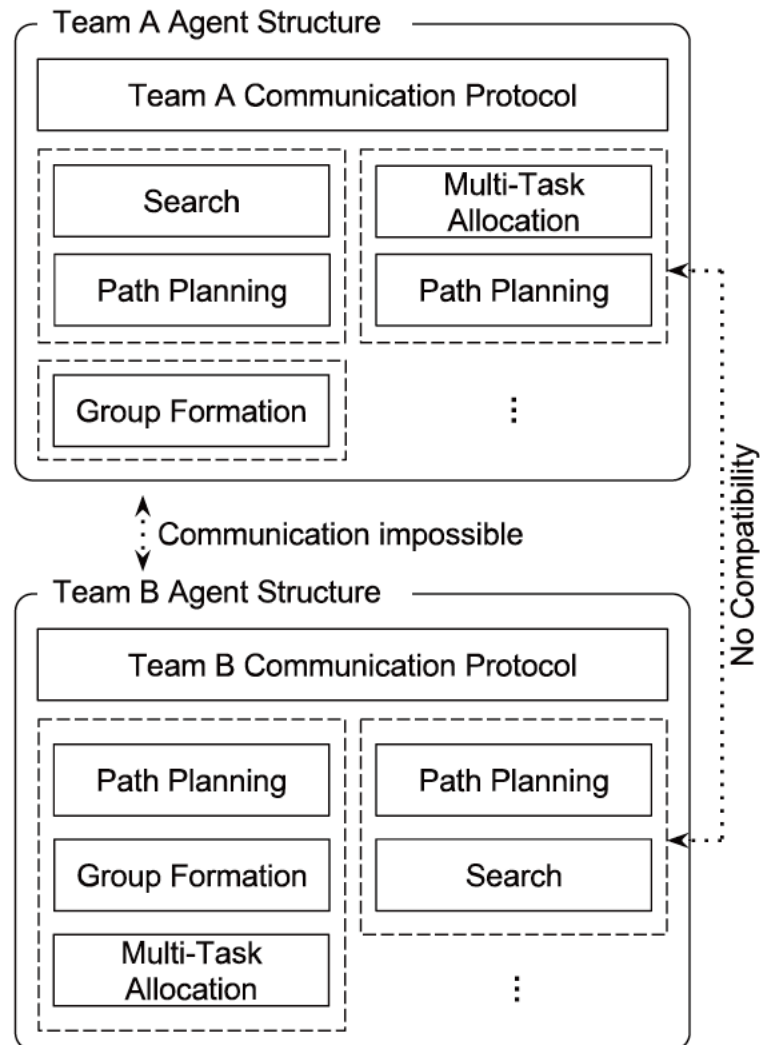

Agent Development Framework (ADF)

Normal agent structure before ADF

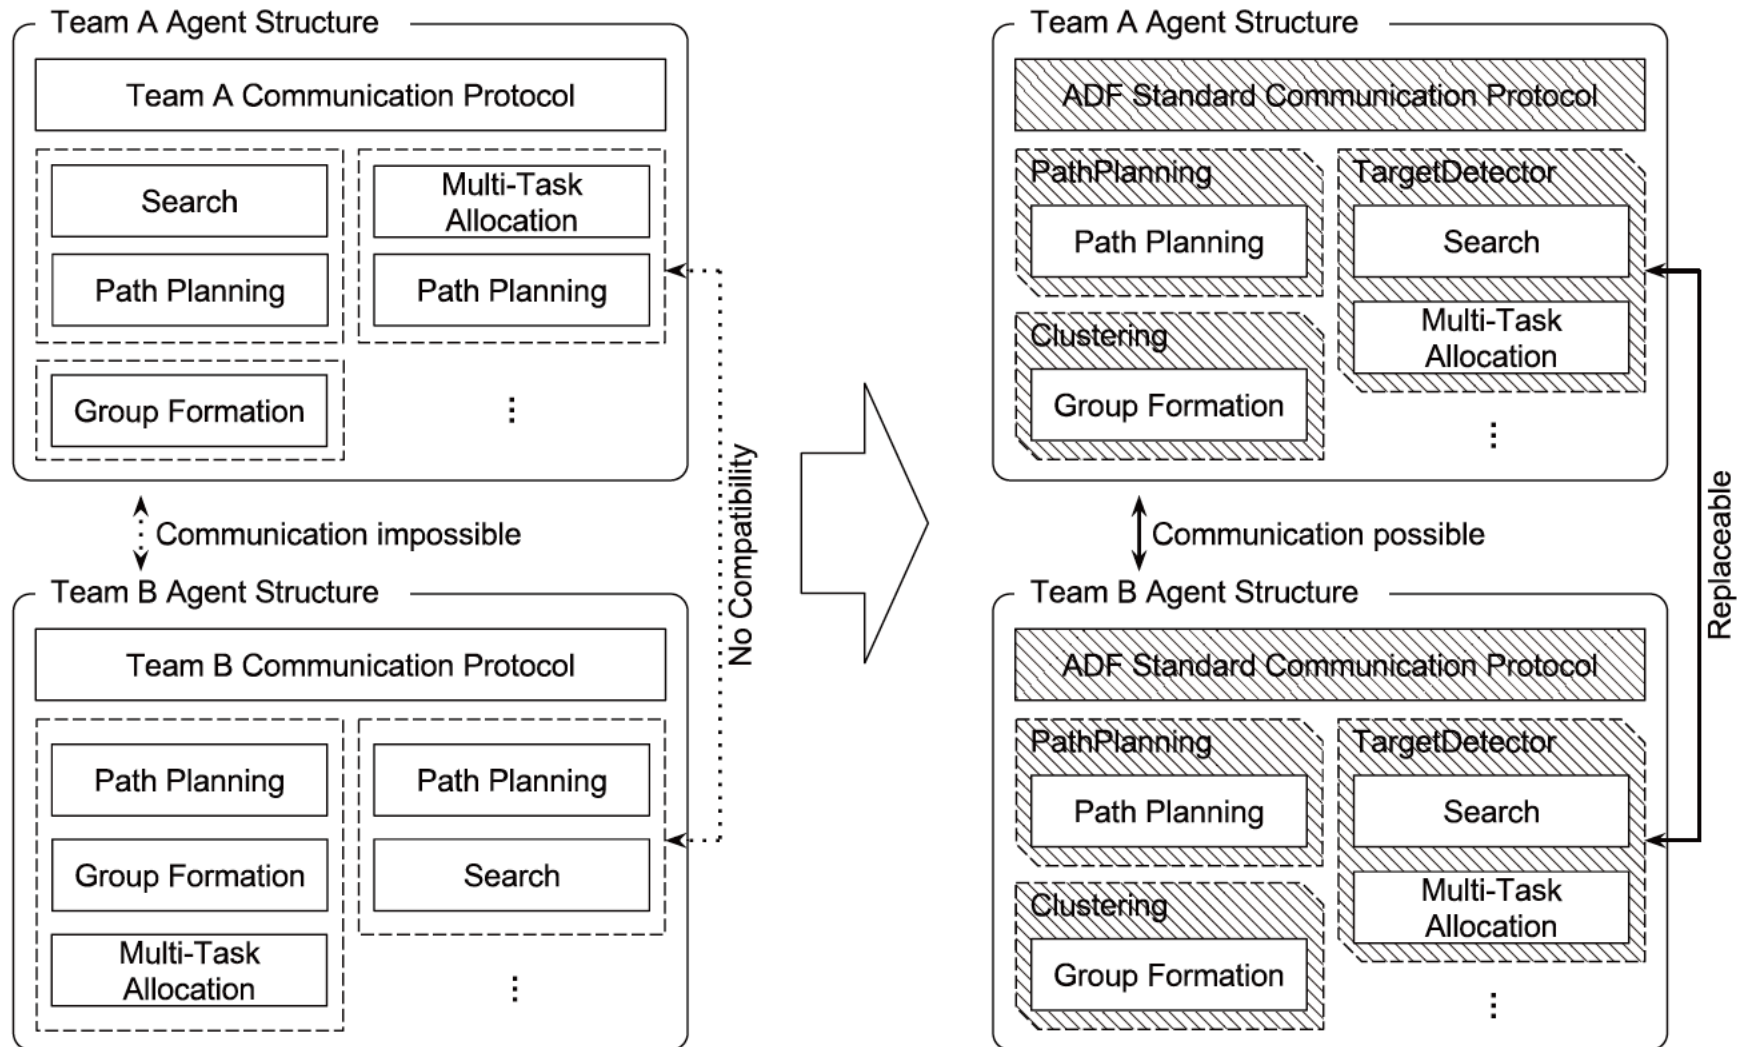

Agent Development Framework (ADF)

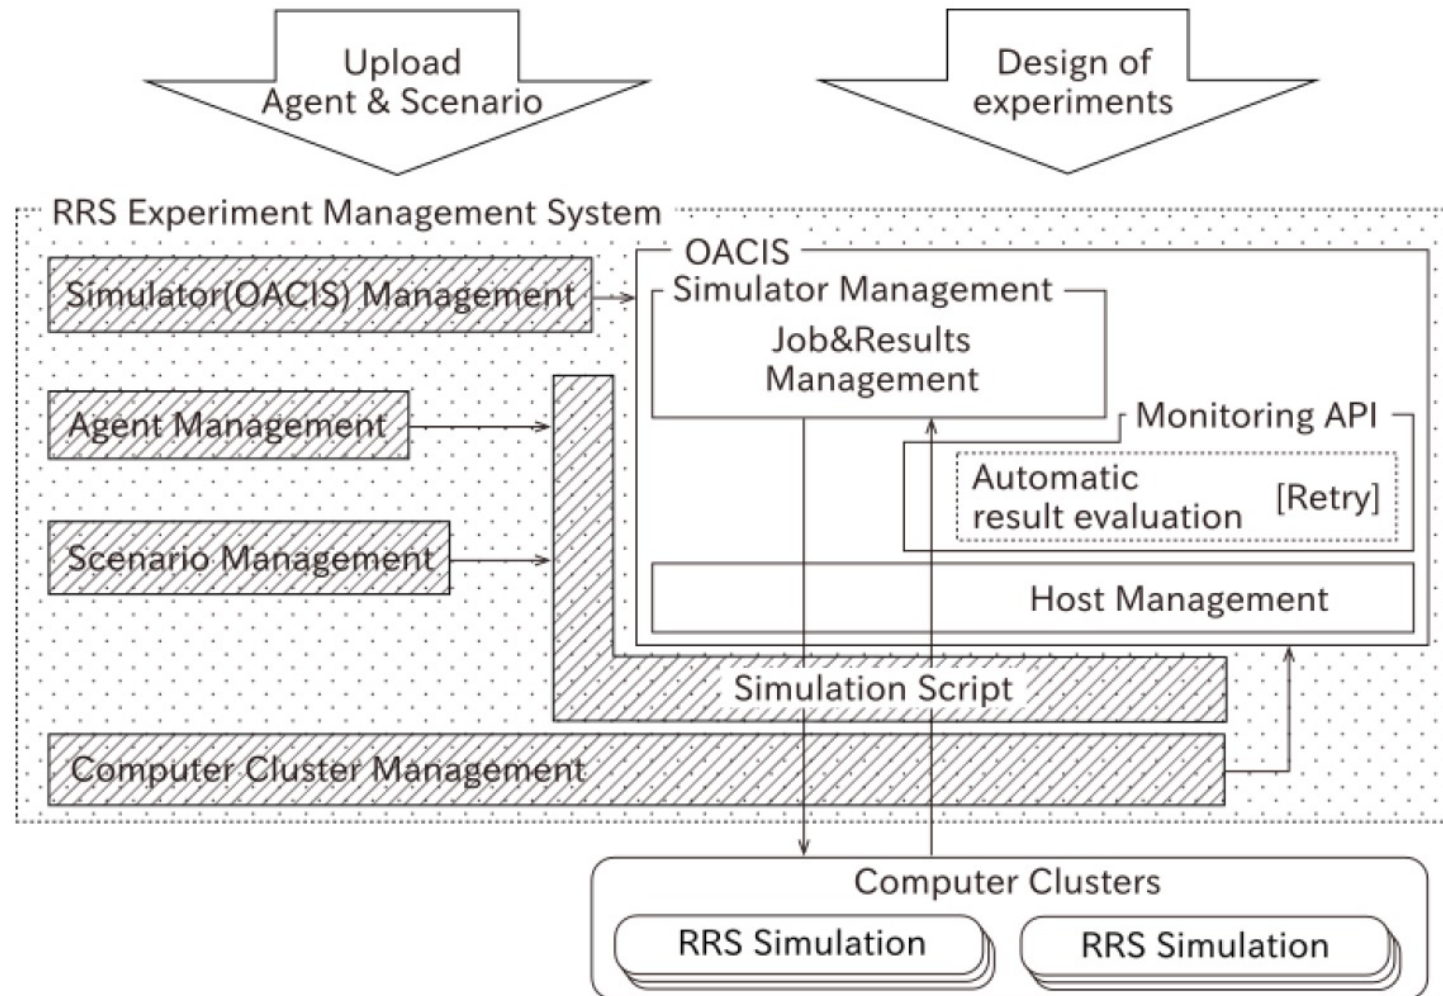

Combinations with other teams

Agent Development Framework (ADF)

Simulation Management System (RRS-OACIS)

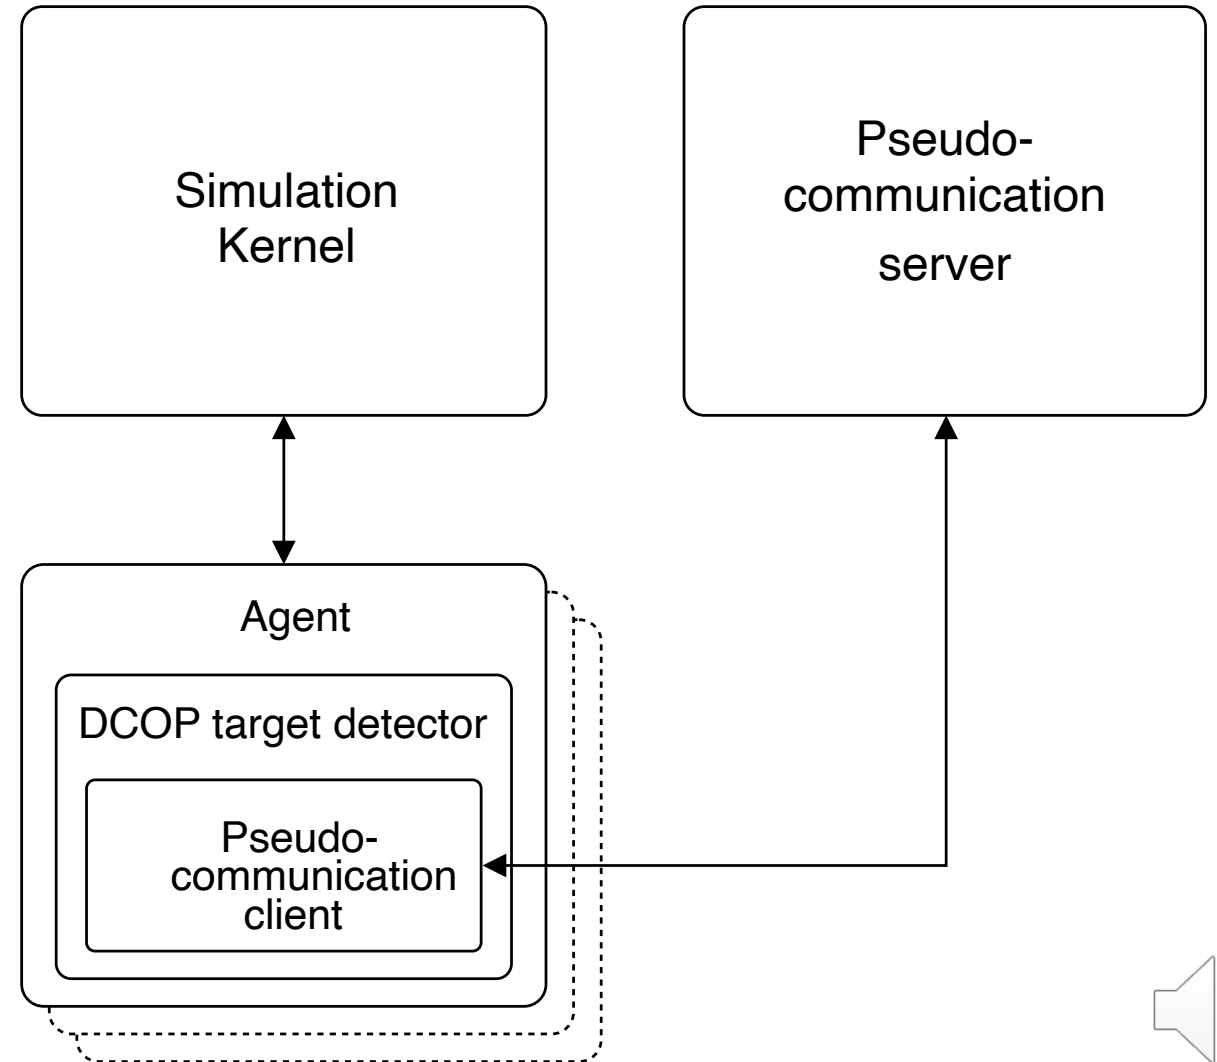

DCOP Module for Rescue Simulation

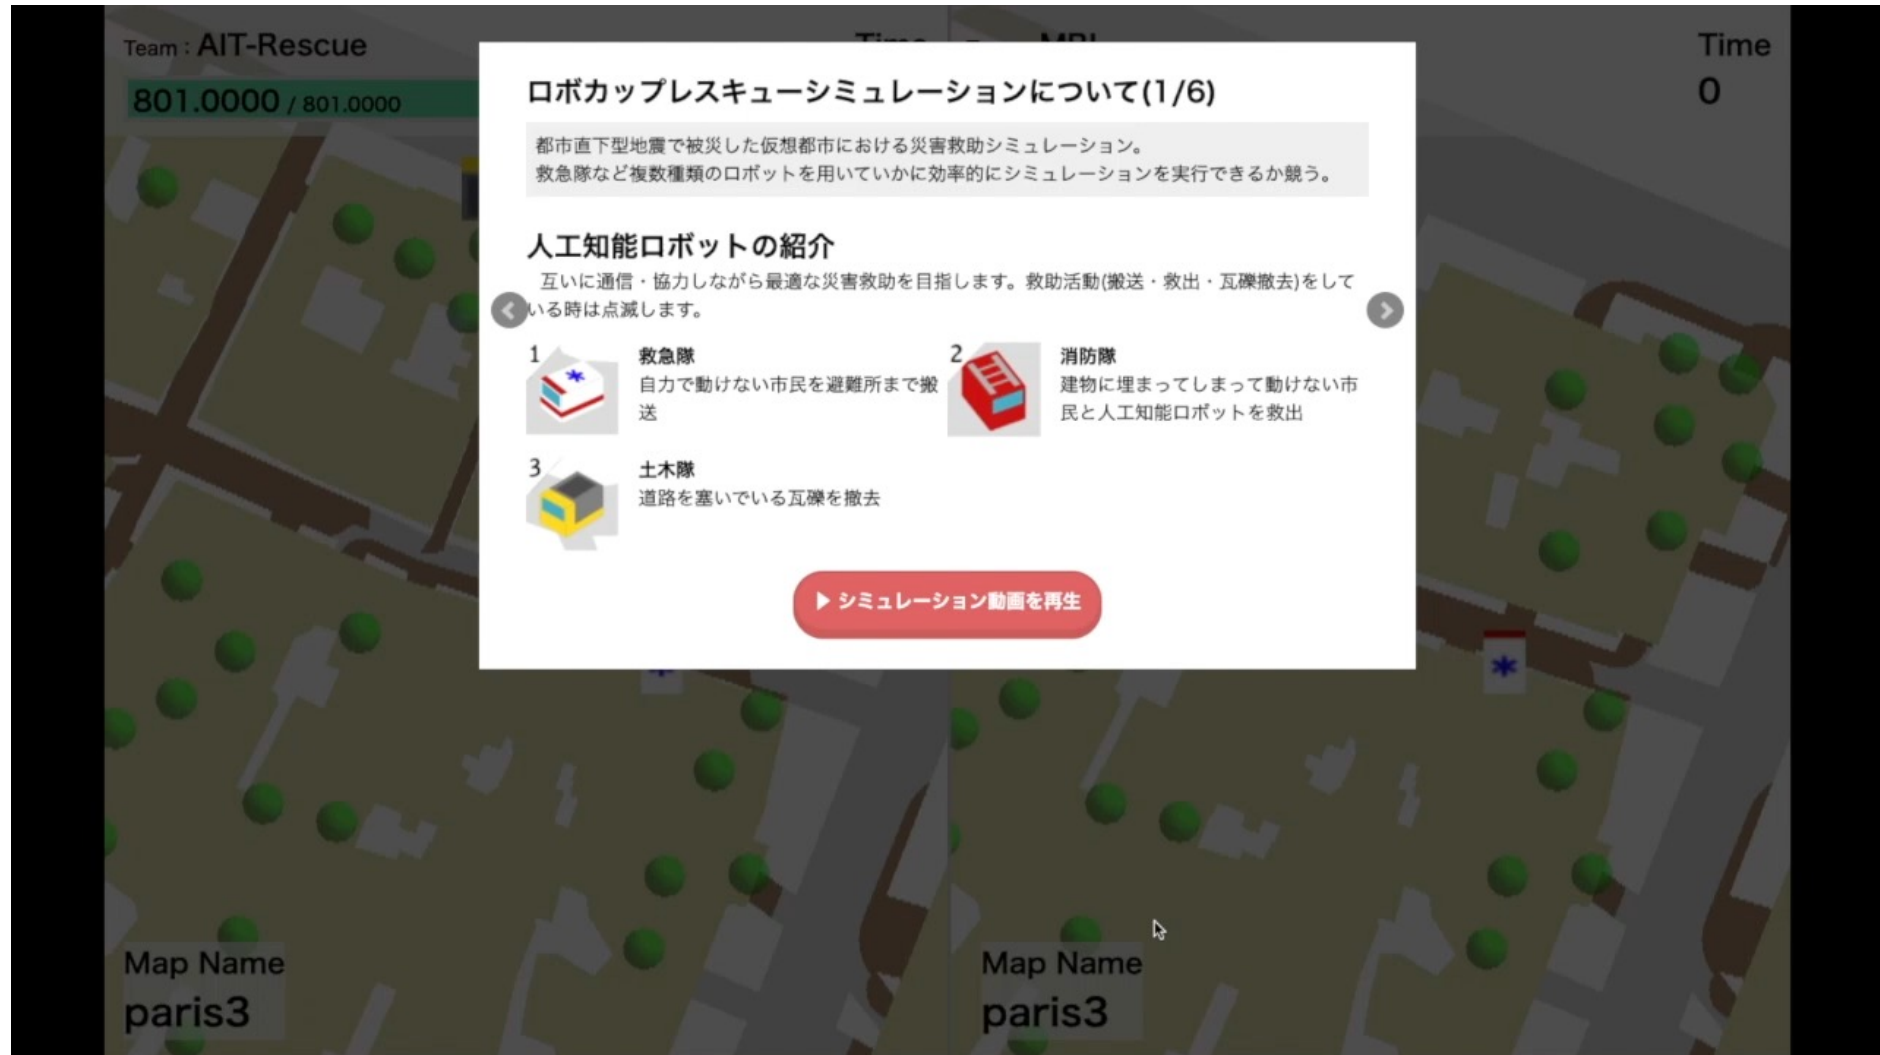

Multi-Task Allocation
in RRS

modelization

Distributed Constraint
Optimization Problem
(DCOP)

3D Viewer for RRS

Expectations for Future

- Linking RoboCupRescue with other competitions
 - It is important to be aware of how our results will be used in the end, and to have concepts that takes into account their relationships.
 - Consideration of collaboration between agent and virtual robot competitions
- Contributions to real world
 - Making a challenge an activity needed in the actual disaster area and the field is effective.
 - Not only the scenario immediately after the disaster, but also the scenario after a while after the disaster is good.
- Academic challenge
 - Actively take on academic challenges and promote the League.

Thank you
